<sup>1</sup>Water resistance on Epson Premium Photo Paper Glossy, Premium Photo Paper Semi-Gloss, Premium Luster Photo Paper, and Photo Paper, when using genuine Epson inks.

<sup>2</sup>Cartridge yields are based on continuous printing of a suite of five black and color pages as required by ISO/IEC 24711 and 24712. Actual yields will vary considerably for reasons including images printed, print settings, temperature and humidity. Yields may be lower when printing infrequently or predominantly with one ink color. A variable amount of ink remains in the cartridges after the "replace cartridge" signal. Part of the ink from the first cartridges is used for priming the all-in-one. Ink is used for both printing and print head maintenance. All inks are used for both black and color printing. For more information about yields for this all-in-one, see [www.epson.com/cartridgeinfo](http://www.epson.com/cartridgeinfo).

<sup>3</sup>Ink fade resistance ratings based on accelerated testing of unframed color prints on plain paper in indoor display conditions. Actual print stability will vary according to light intensity, temperature, humidity, and other factors. Epson does not guarantee the longevity of prints. See [www.wilhelm-research.com](http://www.wilhelm-research.com).

<sup>4</sup>Some applications and/or functions may not be supported by Mac<sup>®</sup>.

<sup>5</sup>See our website for convenient and reasonable recycling options at [www.epson.com/recycle](http://www.epson.com/recycle).

<sup>6</sup>Maximum pages/copies per minute (PPM/CPM) are measured after first page with text patterns in Draft mode on plain paper. Laser quality black and color print speeds (4.4 / 2.1 ppm black / color) are determined in default, single-side mode in accordance with ISO/IEC 24734. Actual print times will vary based on system configuration, software, and page complexity. See [www.epson.com/printspeed](http://www.epson.com/printspeed) for details, including complete ISO reports.
