

ZoneAlarm® Internet Security Suite

Small Business Edition

www.zonelabs.com/smallbizreseller

Small businesses often use routers to network their computers. Most routers include a built-in hardware firewall that monitors and blocks inbound communications at the network level. For the most complete protection against new and emerging Internet threats, businesses should also have a personal firewall installed on all their computers to protect them against spyware, hacker attacks, viruses, identity theft, spam, and much more. Unlike your small business router, ZoneAlarm® Internet Security Suite Small Business Edition can protect your business computers wherever they may be used offsite—in a hotel room, at an employee's home, or in an Internet cafe.

ZoneAlarm Internet Security Suite Small Business Edition provides layered protection that includes our operating system firewall (OSFirewall™), network and program firewall, antivirus and anti-spyware protection, and our SmartDefense™ Service. The operating system firewall protects your Windows® operating system from attacks all the way down to its core. The network and program firewall delivers proactive firewall protection with multiple layers of security that stop inbound, outbound, and program attacks while remaining completely invisible to hackers. Integrated anti-spyware and antivirus protection scans for and removes spyware, viruses, and other malware from a computer quickly and easily. The SmartDefense Service keeps a computer updated with the latest security intelligence gathered from Zone Labs experts and the ZoneAlarm user community.

The easy-to-use ZoneAlarm Internet Security Suite Small Business Edition interface and out-of-the-box security settings mean your computer(s) will be protected in minutes. Out-of-the-box, default security settings begin safeguarding a computer as soon as ZoneAlarm Internet Security Suite Small Business Edition is installed and running. ZoneAlarm Internet Security Suite Small Business Edition is also flexible and customizable, allowing users to tailor security levels and controls to meet their specific needs.

The Most Complete Internet Security Solution

The benefits of installing ZoneAlarm® Internet Security Suite Small Business Edition on every computer in your network include:

- **Direct Protection**—While a router's built-in firewall protects the network's entrance, ZoneAlarm Internet Security Suite Small Business Edition can directly protect each individual computer on the network and prevent infections (such as viruses) from spreading from one computer to another.
- **Mobile Security**—ZoneAlarm Internet Security Suite Small Business Edition protects mobile employees by detecting new networks, even wireless networks, and automatically configuring VPNs.
- **Reduced IT Support and Hassle**—ZoneAlarm Internet Security Suite Small Business Edition's intuitive user interface and Quick Start Tutorial makes it easy for users to get up and running without the need for IT support. Security updates are automatically sent to each computer on your network, reducing administration hassles and worries.

Key Features of ZoneAlarm Internet Security Suite Small Business Edition:

Network and Program Firewall

- **World's #1** network and program firewall uses multiple layers of protection.
- **Barricades** every PC port from external attack.
- **Makes PC invisible** to hackers when connected to the Internet.
- **Prevents** malicious programs from accessing the Internet and transferring stolen data.

Operating System Firewall (OSFirewall™)

- **Monitors** program installation, registry changes, and file access down to the operating system.
- **Detects** suspicious behavior and disables dangerous programs on the operating system.
- **Monitors** additional program actions for more thorough protection against spyware, Trojan horses, and other threats.

Anti-Spyware

- **Spy Site Blocking** prevents spyware from getting on a PC by blocking it at its #1 source: spyware distribution sites.
- **Stops spyware** already on your PC from contacting or sending personal data to malicious sites.

- **Scans for and Removes** spyware continuously – even the most persistent, hard-to-find programs that infiltrate at the core level.
- **Advanced Proactive Detection** uses behavior- and pattern-based analysis to detect unknown spyware to protect against emerging threats.
- **Easy-to-Use Interface** to clear legitimate monitoring software so it doesn't get picked up in every spyware scan. Also allows user to change, update, monitor and customize settings with one convenient interface panel.

Antivirus

- **Scans for and Removes** viruses continuously – even the most persistent, hard-to-find programs that infiltrate at the core level.
- **Advanced Proactive Detection** uses behavior- and pattern-based analysis to detect unknown viruses to protect against emerging threats.
- **Multiple Automatic Scanning Options** find viruses in emails, compressed files, and in files accessed by a PC (when a file is opened, accessed, written, or restored from disk).

Identity Theft Protection

- **Extends** protection to the physical world, where most identity theft occurs, by complementing the safeguards that the software puts on a PC. ZoneAlarm Internet Security Suite is the first and only personal security software to expand this vital protection beyond the desktop.
- **Stops** pre-approved credit card offers, which contain sensitive financial data often used by criminals for identity theft (offered via a credit industry service - US only).
- **Detects** theft by monitoring both cyberspace and stolen credit card lists from vendors, consumers, and the underground. Alerts you if your credit cards are stolen.
- **Provides** a low-cost, public records report to alert you of fraud, such as phony DMV records (US only).
- **Assists** identity theft victims with personal telephone counseling to guide them through resolution and recovery (US only).
- **Offers** identity theft education and tools to help you prevent, detect and recover from identity theft.

SmartDefense™ Service

- **SmartDefense Advisor** automatically provides safe recommendations on whether users should allow or deny Internet access to programs that request it.
- **DefenseNet™** acts as an early warning system to keep PC security updated from the latest spyware attacks using up-to-the-minute intelligence from the ZoneAlarm community.
- **Outbound Filtering** tells when a program on the computer is trying to access the Internet, and prevents unauthorized or unknown programs from sending out personal information.
- **MD5 Signature Technology** is the equivalent of a human fingerprint for programs. It helps prevent users from accidentally granting Internet access to malicious software that pretends to be legitimate.

Additional Features

- **Anti-Phishing** automatically identifies and isolates dangerous email scams—even the latest ones.
- **Spam Blocker** automatically adapts to the ever-changing techniques of professional spammers to keep inboxes clear of junk emails. Lets users update and easily maintain a list of blocked spammers.
- **Privacy Protection** manages or blocks unwanted ads, cookies, cache, and scripts.
- **Inbound MailSafe** automatically quarantines suspicious email attachments and blocks them from auto-launching or being opened by accident.
- **Outbound MailSafe** automatically monitors outgoing email and halts messages with potential viruses before they're transmitted. Prevents worms and viruses from sending infected emails to everyone in an address book.
- **IM Protection** secures instant messages—even those sent between different IM services—so they can't be monitored. Works with AOL® Instant Messenger, Yahoo® Messenger, MSN® Messenger, and Trillian.
- **Parental Controls** enable parents and business owners to block access to offensive Web content.
- **Wireless PC Protection** identifies new and unsecured networks, sets appropriate security
- **Free Upgrades** for one year so you always have the most current version.
- **Free Upgrade for Windows Vista™** within one year so you can use the new operating system with confidence.
- **Free Online Technical Support** available 24/7 and through our automated support agent.

Easy-to-Use Security

- **Pre-loaded Security Settings** provide easy, instant protection for anyone who wants simplicity with peace of mind.
- **Automatic Network Detection** identifies new wired or wireless networks so users can adjust protection when at home, at the office, or in an Internet café.
- **Automatic Update Notification** keeps Internet security current with automatic alerts when new updates are available.

System Requirements

- Microsoft Windows 2000 Pro/XP
- Intel® Pentium® III processor 450 MHz or higher
- 50MB of available hard disk space
- Internet access
- Minimum system RAM: 64MB (2000 Pro), 128MB (XP)
- Supported protocols for email protection
 - POP3
 - SMTP
 - IMAP4
